

QuickTrack - GPS

GPS / Wi-Fi / Cellular Cart Tracking Solution

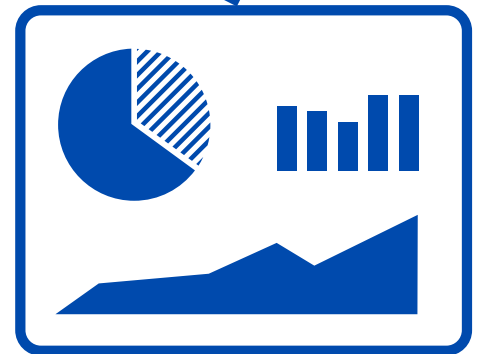

The average store loses **\$20,000** worth of shopping carts every year. Now, you can permanently end the loss with QuickTrack: a totally wireless cart tracking solution.

How it Works

When carts leave a customizable, **wireless**, geofence - its location is tracked and reported. It's movement and [route history](#) is also recorded for loss prevention investigation purposes.

The cart's location is determined through a combination of GPS and Wi-Fi signals. That location is then communicated over cellular networks to the QuickTrack software. A variety of dashboards and alert systems can be setup in QuickTrack - including a "repeat offenders" list of locations where stolen carts commonly congregate.

What You Need

Any cart based tracking device:

- [DTx GPS or Wi-Fi Tracker](#)
- [Mobile Gateway](#)

Optional [Ad Panel](#)

[QuickTrack](#) software platform. NO setup or install at the store. Trackers communicate direct to QuickTrack.
